MANUSCRIPT FORMATTING

Word Document and General Manuscript Information

1. All manuscripts must be in Microsoft® Word (.doc or .docx) and formatted in 12-point Times New Roman and double-spaced (except for indented quotations).
2. Manuscripts should be no longer than 7,000 words. That is, 30 pages of main text and an overall total not to exceed 50 pages including references, figures, tables, and appendices. The only exception is for Current Issues in Auditing, which has a maximum word count of 2,500. Manuscripts should be as concise as the subject and research method permit.
3. Set margins at 1 inch from top, bottom, and sides.
4. To promote anonymous review, authors must not identify themselves directly or indirectly in their papers or in experimental test instruments included with the submission. Single authors must not use the editorial “we.”
5. The American Accounting Association encourages use of gender-neutral language in its publications.
6. Experimental studies using human subjects must include a footnote that affirms approval has been granted by the institution at which the experiment took place.
7. A wide range of supplemental materials can be hosted on the AAA Digital Library including audio and/or video files, spreadsheets, financial reports, data sets, and full color versions of graphics appearing only as black and white in the journal pages. Authors are encouraged to provide supporting or additional materials as appropriate. These materials will be subject to normal editorial review and therefore should also not include author-identifying information.

Title Page

The title of the paper, preferred running head (maximum 115 characters and spaces), all authors’ names, affiliations, email addresses, and acknowledgments (if desired) must appear in a stand-alone Word document. See example here.

Abstract, Keywords, and Article Text Page

Abstract

The article file must begin with the abstract of no more than 150 words and immediately precede the text, which should start on a new page. The abstract should concisely inform the reader of the manuscript’s topic, its methods, and its findings. The manuscript’s title, without author names or affiliations, must appear on the abstract page.

Keywords

The abstract must be followed by at least three keywords to assist in indexing the paper and identifying qualified reviewers. JEL Classifications and Data Availability may be included, if desired. See example here.

Article Text

The text of the paper starts below the keywords, with a section labeled INTRODUCTION. The introduction should provide more details about the paper’s purpose, motivation, methodology, and findings. Both the abstract and the “Introduction” section should be relatively nontechnical, yet clear enough for an informed reader to understand the manuscript’s contribution. See example here.
Section and Subsection Headings

First-level headings are to be arranged so that major headings are centered, bold, capitalized, and be numbered using roman numerals I, II, III, etc. Second-level headings are flush left, bold, and both uppercase and lowercase. Third-level headings are flush left, bold, italic, and both uppercase and lowercase. Fourth-level headings are paragraph indent, bold, and lowercase. See below for the correct formatting:

I. A CENTERED, BOLD, ALL CAPITALIZED, FIRST-LEVEL
HEADING A Flush Left, Bold, Uppercase and Lowercase, Second-Level Heading
A Flush Left, Bold, Italic, Uppercase and Lowercase, Third-Level Heading
A paragraph indent, bold, lowercase, fourth-level heading. Text starts …

General Formatting

Pagination
All pages, including references, appendices, and tables are to be serially numbered.

Numbers
Spell out numbers from one to ten, except when used in tables and lists, and when used with mathematical, statistical, scientific, or technical units and quantities, such as distances, weights and measures. For example: three days; 3 kilometers; 30 years. All other numbers are expressed numerically.

Percentages
In nontechnical copy use the word percent in the text, e.g., “We find that approximately 28 percent of the sample has a new CEO.”; in tables and figures, the symbol % is used, e.g., 28%.

Mathematical Notation
Mathematical notation should be employed only where its rigor and precision are necessary, and in such circumstances authors should explain the principal operations performed in narrative format. Notation should be avoided in footnotes. Use standard mathematical notation and symbols. Do not use wingdings, geometric shapes, or images.

Equations
Equations should be consecutively numbered in parentheses flush with the right-hand margin.

Footnotes
Footnotes are not used for documentation (citations). Textual footnotes should be used only for extensions and useful excursions of information that, if included in the body of the text, might disrupt its continuity. Footnotes must be inserted using the “Footnote” feature in Microsoft Word, which will automatically number the footnotes. Footnote callouts are to be formatted as Arabic numerals. Do not use “endnote” formatting.
Journal articles that use legal-style footnote documentation should follow The Bluebook: A Uniform System of Citation, as used by the Harvard Law Review.
Tables and Figures

1. Each table and figure (graphic) appears on a new page at the end of the text, after the References section. Use an Arabic number and a complete title that indicates the exact contents of the table/figure. The titles should be sufficiently detailed to enable the reader to interpret the tables and figures without reference to the text.
2. Variables used in tables and figures can either be defined in every table/figure, or defined in an appendix. Include a table/figure note when variables are defined in an appendix.
3. Create tables using the table editor in Microsoft Word or Excel. Do not format tables using keyboard spaces, tabs, and hard returns or be revising the page layout using the “Columns” feature in Word.
4. A reference to each table/figure must be made in the text. Tables/figures must be mentioned in numerical order. Tables/figures will be positioned in the article as close to the first mention of the table/figure as possible during the final page-layout process.
5. Figure graphics must be interpretable in greyscale, and should also be reasonably interpreted without reference to the text. Original color graphics can included in the submission files to be provided as downloadable supplemental material files.
6. Figures must be provided as PDF, JPG, PPT, or PNG files.
7. Source attribution and re-use permission notes should be included as necessary. Please note that it is the responsibility of the author to obtain re-use permissions.
8. Please ensure that reporting of descriptive statistics and of models and tests of hypotheses is complete. For experimental papers, this would generally include: (1) reporting standard deviation and cell sizes in any tables of means, (2) including degrees of freedom along with any reported test statistics that have degrees of freedom, whether in the tables, footnotes, or text, and (3) ensuring ANOVA, MANOVA, ANCOVA, etc. tables are complete, including all estimated terms, including the error term, along with the associated degrees of freedom. Note that if test statistics and associated degrees of freedom are reported in the tables, authors need not repeat these statistics in the text. For example, authors could provide only the p-values for effects (tests) of interest in the text, if desired.
9. When tabular values are not applicable in a column, use “NA” capitalized with no slash between. When tabular values are non-significant in a column and therefore no value is shown, use “n.s.”

CITATIONS AND REFERENCES

Citations

In-text citations are made using an author-date format. Cited works must correspond to the works listed in the “References” section. Authors should make an effort to include the relevant page numbers in the in-text citations.

1. In the text, works are cited as follows: author’s last name and year, without comma, in parentheses. For example: one author, (Berry 2003); two authors, (Fehr and Schmidt 2003); three to five authors, (Scholes, Wolfson, Erickson, Maydew, and Shevlin 2008); six or more authors, (Dikolli et al. 2013); more than one work cited, (Cole and Yakushiji 1984; Dechow, Sloan, and Sweeney 1995; Levitt 1998); with two works by the same author(s), (Nelson 2003, 2005).
2. When the author’s name is mentioned in the text, it need not be repeated in the citation. For example: “Cohen et al. (2005) provide …”
3. Authors should cite themselves, in the third person, as though they would any work that is cited in the text.
4. For repeated citations of works that have three or more authors, use only the first author’s last name followed by “et al.” (et is not followed by a period): first citation, Dechow, Kothari, and Watts (1998); subsequent citations, Dechow et al. (1998).
5. Unless confusion would result, do not use “p.” or “pp.” before page numbers. For example, (Dechow and Dichev 2002, 41–42).
6. When the reference list contains two or more works by the same author (the only author or first of two or more authors) published in the same year, the suffix a, b, etc., is appended to the date in both the in-text citations and in the “References” section. For example, (Johansson 2004a, 2004b, 2004c; Baiman and Rajan 2002a, 2002b; Dhaliwal, Erickson, and Li 2005a; Dhaliwal, Krull, Li, and Moser 2005b).
7. First initials of same-surname authors are added to the first citation of the work to conform to AAA standard style, e.g., P. Podsakoff, MacKenzie, Lee, and N. Podsakoff (2003).
8. Citations to institutional works should use acronyms or short titles where practicable. For example: (NCFFR, The Treadway Commission 1987).
9. If the paper refers to statutes, legal treatises, or court cases, citations acceptable in law reviews, such as the Harvard Law Review, should be used.

Reference List

Every manuscript must include a “References” section that contains only those works cited within the text. Each entry should contain all information necessary for unambiguous identification of the published work. Use the following formats (which generally follow The Chicago Manual of Style):

1. Arrange citations in alphabetical order according to the family name of the first author or the name of the institution or body responsible for the published work.
2. Use authors’ initials instead of proper names.
3. For two or more authors, separate authors with a comma, including a comma before “and” (Dechow, P. M., R. Sloan, and A. Sweeney).
4. Date of publication follows the name(s) or author(s).
5. Titles of journals or newspapers are not to be abbreviated.
6. For resource materials that were only available online and are now no longer available, please include a “last accessed” date as a parenthetical note appended to the end of the URL.

Sample Reference Entries

expertise, competing corporate governance mechanisms, and earnings management.

**Tax Journal Citations and Sample References**

For journal articles that use legal-style footnotes, reference to a single regulation, government promulgation, or court case should be made as shown below. Generally, references to multiple works of the same type (e.g., two revenue rulings) or multiple works of different types (e.g., a revenue ruling and a court case) should be made through the use of a footnote unless they are brief and do not disrupt the flow of the text. The form for tax citations often encountered is presented below.

I.R.C. § 1248(a)  
LTR 8208047 (11/26/80)  
Treas. Reg. § 1.1248–3(a)(4)

PUBLICATIONS POLICIES

Policy on Prior Publication

Manuscripts appearing in AAA journals are normally original papers that have not been published by the author(s) elsewhere. The availability of a previous version of a manuscript on a working paper series such as SSRN, or a conference website created to distribute papers to conference participants in advance of a conference does not constitute prior publication. A publicly available conference proceeding could represent a form of publication, however. A conference proceeding is the official record of a conference meeting consisting of a collection of documents in paper or electronic form, which corresponds to papers presented at the conference along with additional information such as title page, foreword, and other material that identifies the collection as a set or connected group.

Industry Characteristics, Risk Premiums, and Debt Pricing

ABSTRACT
Despite theoretical and anecdotal evidence highlighting the importance of industry-level analyses to lenders, the empirical literature on debt pricing has focused almost exclusively on firm-level forces that affect expected loss. This paper provides empirical evidence that industry-level characteristics relate to debt pricing through risk premiums. We address the empirical challenges that arise when testing these theories by using a proprietary dataset of time-varying and forward-looking measures of industry characteristics. These characteristics include growth, sensitivity to external shocks, and industry structure, all measured at the six-digit NAICS level. Our results show that lenders demand higher spreads to bear industry-level risk. The relation exists within subsamples with constant credit ratings, and strengthens when lenders’ loan portfolios are less diversified and during periods when diversification is difficult. Therefore, our results suggest that industry characteristics relate to debt pricing by informing lenders not only about expected loss but also about risk premiums.

Keywords: debt; probability of default; loss given default; industry characteristics.
